Question:
Which term of the following sequences:
(a) 2,2 $\sqrt{2}$,4...is 128 (b) $\sqrt{3}$,3,3 $\sqrt{3}$...is 729
(c) $\frac{1}{3},\frac{1}{9},\frac{1}{27}$...is $\frac{1}{19683}$

Answer: (a) Let $x_1(0) = 2$, $r_1 = \sqrt{2}$, then:

$$x_1(n) = x_1(0)\, r_1^n u[n] \tag{1}$$

where u[0] = 1. Assuming $x(n) = 128$:

$$x_1(n) = x_1(0)\, r^n = 128 \tag{2}$$

$$\implies n = \log_{r_1} \frac{128}{x_1(0)} \tag{3}$$

Using values from Table 1,

$$\implies n = \log_{\sqrt{2}} \frac{128}{2} \tag{4}$$

$$\therefore n = 12 \tag{5}$$

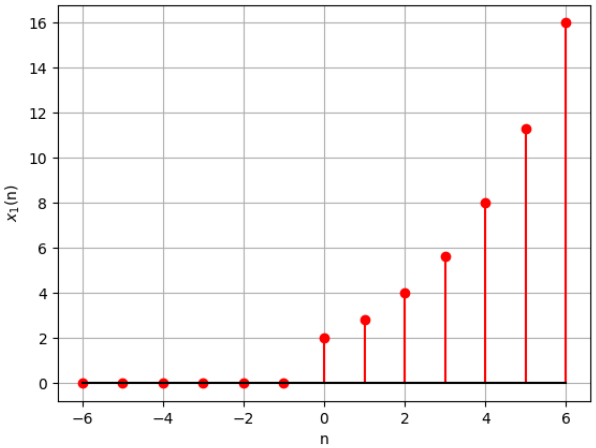

Fig. 1: Plot of $x_1(n)$ vs n. See Table 1

Let $x(n) = x(0)\, r^n u[n]$ then:

$$X(z) = \sum_{n=-\infty}^{\infty} x(n) \cdot z^{-n} \tag{6}$$

$$\implies X(z) = \sum_{n=0}^{\infty} x(0)\, r^n z^{-n} \tag{7}$$

$$\implies X(z) = x(0)\left(\frac{1}{1-\frac{r}{z}}\right) \tag{8}$$

$$\therefore X(z) = \frac{x(0)}{1 - rz^{-1}} \quad \forall \quad |z| > |r| \tag{9}$$

$$\therefore X_1(z) = \frac{2}{1 - \sqrt{2}z^{-1}} \quad \forall \quad |z| > \sqrt{2} \tag{10}$$

(b) Let $x_2(0) = \sqrt{3}$, $r_2 = \sqrt{3}$, then:

$$x_2(n) = x_2(0)\, r_2^n u[n] \tag{11}$$

Assuming $x(n) = 729$:

$$x_2(n) = x_2(0)\, r_2^n = 729 \tag{12}$$

$$\implies n = \log_{r_2} \frac{729}{x_2(0)} \tag{13}$$

Using values from Table 1,

$$\implies n = \log_{\sqrt{3}} \frac{729}{\sqrt{3}} \tag{14}$$

$$\therefore n = 11 \tag{15}$$

By eqn 9, the Z-transform of $x_2(n)$:

$$X_2(z) = \frac{\sqrt{3}}{1 - \sqrt{3}z^{-1}} \quad \forall \quad |z| > \sqrt{3} \tag{16}$$

(c) Let $x_3(0) = \frac{1}{3}$, $r_3 = \frac{1}{3}$, then:

$$x_3(n) = x_3(0)\, r_3^n u[n] \tag{17}$$

Assuming $x(n) = \frac{1}{19683}$:

$$x_3(n) = x_3(0)\, r_3^n = \frac{1}{19683} \tag{18}$$

$$\implies n = \log_{r_3} \frac{1}{19683 x_3(0)} \tag{19}$$

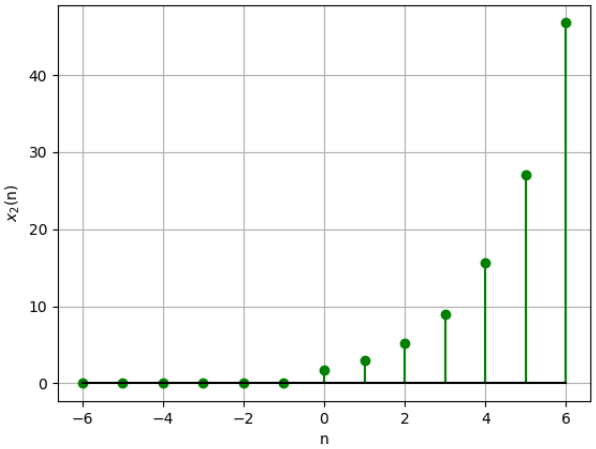

Fig. 2: Plot of $x_2(n)$ vs n. See Table 1

Using values from Table 1,

$$\implies n = \log_{\frac{1}{3}} \frac{1}{19683\frac{1}{3}} \tag{20}$$

$$\therefore n = 8 \tag{21}$$

By eqn 9, the Z-transform of $x_3(n)$:

$$\therefore X_3(z) = \frac{1}{3 - z^{-1}} \quad \forall \quad |z| > \frac{1}{3} \tag{22}$$

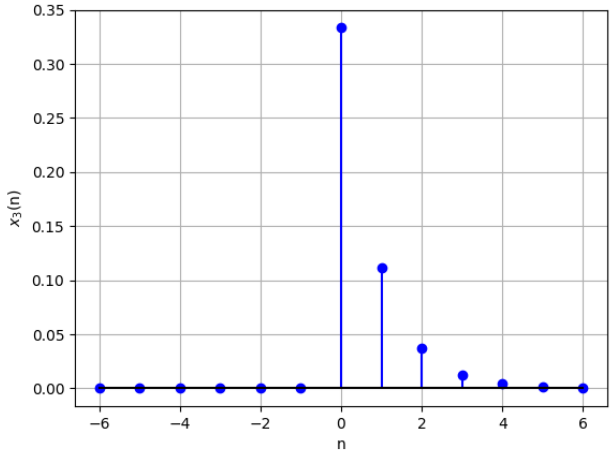

Fig. 3: Plot of $x_3(n)$ vs n. See Table 1

Parameter	Description	Value
r_i	Common ratio of G.P (a),(b),(c)	$\sqrt{2}$, $\sqrt{3}$, $\frac{1}{3}$
$x_i(n)$	Sequence	$x_i(0)\, r_i^n u[n]$
$X_i(z)$	Transform of $x_i(n)$	$\frac{x(0)}{1-rz^{-1}}$
